I have a little experience with micro-controllers but nothing with Arduino. However, I didn't find much in this book that helped me understand the Arduino products or how to use them. At times it seemed like the author assumes you have some electronic background, then other times he is talking like you can't even spell "electricity". He also tries to cover a wide range of topics but never explains any of them with enough detail that you feel like you understand what's going on. And there are outright errors, such as "water pipes allow the user to flow the water in one direction, a resistor works similar to that". Uhh, no. Resistors don't have anything to do with controlling the direction of current flow. I should mention that this book is short - REALLY short. I think I read it in 20-30 minutes. The book

also has a lot of grammar and typographical errors, so much so that I'm not sure the author's first language is English. He might know the subject matter but he isn't doing a good job of getting that across because of the poor sentence structure. For example, "You can start from LED" or "Not only this Arduino is simple". This next paragraph just didn't make any sense to me - "Another important thing that we should mention here is "Shields". An Arduino shield gives the user the craziest of all things". That's it, no other mention of shields, what they do, why you would use them, or even an explanation of why they are called "shields". Nada, just this meaningless paragraph stuck in the middle of the book. And who is the real author? shows this book is written by Harry Jones, a nice "English" name.
